SIMPLE

At last a simple and effective orthodontic treatment to add to your practice. TRU-LINE™ Invisible Orthodontic System allows you the flexibility to treat many types of Orthodontic cases easily.

Before

After

PROVEN

TRU-LINE™ uses the proven principles of orthodontics to apply pressure to teeth to move them in a predictable manner. Using a combination of "invisible" aligners and in some cases specialized fixed and removable appliances, TRU-LINE™ gives you a range of options to suit each individual clinical case.

THE TRU-LINE DIFFERENCE

TRU-LINE™ is a simple way to offer Invisible Orthodontics to your patients and it won't break the bank.

Just supply a PVS impression and/or a good quality stone model and we will do the rest.

From your prescription we will adjust the desired teeth and make TRU-LINE™ clear plastic aligners, supplied 2 at a time, to reposition the teeth in gradual increments.

TRU-LINE™ offers a simple cost effective and aesthetically pleasing solution for those patients who do not want conventional orthodontic appliances.

Treatment progress is easily monitored and can be altered at any time, so you are always in control.

Aligners are supplied at treatment intervals. This is a huge advantage over the traditional method of supplying the whole series of "aligners" at one time.

SOME OTHER ADVANTAGES INCLUDE:

- No huge up front lab fees. Aligners are only billed as they are supplied 2 at a time i.e. 2 uppers and 2 lowers if treating both arches.
- Patient benefits may include a 'pay as they go' option. This also helps increase patient treatment acceptance.
- Treatment can be altered or suspended at any time with minimal or no cost.
- Lost appliances are no problem. Replacement aligners are inexpensive and easily supplied.
- No hidden costs.
- TRU-LINE™ is suitable for all clinicians. You may choose to start with simple cases and gradually work up to more complex cases if desired.
